Vol. X. No. 50.

March 1st, 1924.

WEEKLY

THE ROMANCE OF THE FUTURE.

By Sylvia Pankhurst.

Mr. Arnold Lupton insists that his "Happy India"* is not a political book. We are glad of that, for if it were, we do not think it would be so wise as it is, nor would it open up those suggestive vistas of thought which are so rich and which stimulate great hope and enthusiasm in its readers.

The rich vast country is described and the present hideous poverty is vividly presented. Not less than fifty million Indians "never cat from beginning to end of the year one good and sufficient meal." They have only one meal a day and that meal is insufficient. The feast held at the marriage of a son or daughter is paid for with borrowed money and the father remains in debt for it to the end of his life.

When the rains fail and famines result the people are destitute. They cannot save even after many years of good harvest anything to maintain them when the harvest is bad. Even the greatest famines are only local, but the deathrate from famine is great in one part of India whilst the crops are good in another.

The Indian cultivator of the soil lives in a mud hut without doors or windows. Its roof is of sticks and palm leaves. His bedstead, if he has one, is of twisted sticks. His one garment is a cloth round the loins and he has r.othing to wear whilst he is washing it. The average income of the Indian working classes is one halfpenny a day per man, woman and child.

THE IMPOVERISHMENT OF THE SOIL.

The Indian wheat crop is on the average, only one-fifth per acre of the British wheat crop. This is mainly because the Indian soil is impoverished. The poverty-stricken people burn the dung of their cattle for fuel and smear it on the walls of their huts. The dung is even sent to the towns for use as fuel. It is needed to manure the soil. The soil grows poor for lack of it.

When a visitor protests, as Mr. Lupton did, government officials reply: "Oh! it cannot be helped, there is no other fuel that these people can afford to buy; there is no wood, they cannot afford to pay for coal, and, therefore, they must use this manure for the purposes of fuel."

Yet India is rich in forests, in coal, in petroleum. The forests, however, are far away from many districts and a great part of the country has been deforested, much to its detriment. The result is an increasing dryness of climate leading to famine and other evils.

*George Allan and Unwin 6/- or from the

Dreadnought Office.

From the loss of the trees it has resulted that the mountain torrents rush down with unchecked velocity, and so have worn away the river beds. When there are forests on the mountains the water is held up and let down more gradually. As a result of the destruction of forests the bed of the river Jumna has been lowered 50 feet. Some rivers have been lowered more than 100 feet below the surrounding ground, and the water is too far down to be raised by oxen-driven pumps. Electric power could raise the water, but is el not yet supplied. The Indian forests could supply 100,000,000 tons, of fuel each year without damaging them, or reducing the production of timber suitable for building and wood work.

The forests are mainly situated in the mountains, and there is a lack of roads and railways to bring the wood to the people.

If the soil were properly manured, Mr. Lupton contends that the yield of the soil could easily be increased by 50 or 100 per cent.

The value of the present crops amounts to £1,000,000,000. If the value were raised by only 20 per cent., Mr. Lupton contends that the cost of 20,000 miles of railway would be thereby repaid twice in one year. The cost of carrying 40,000,000 tons of coal would be £10,000,000. The Indian mines could easily supply an increase of 20,000,000 tons a year in five years' time, and the coal could be carried an average journey of 300 miles for 10s. per ton. Allowing for a price of 10s. at the pit mouth and 5s. for other charges, the coal could be sold to the cultivator at 25s. per

Mr. Lupton points out that the Afghan War of 44 years ago cost £100,000,000, and that the recent preparations for a recent war that did not materialise were very costly; also that much money is spent on the Indian Army and Government.

He urges that the Government should spend £1,000,000 in one year on afforestation, £1,000,000 on roads and railways, £1,000,000 on artificial manure, supplying the fuel and manure free on condition that the cultivators would put the dung of their animals on the soil and pay to the Government half the profit from the increased crops. He contends that the Government would reap an immediate profit from which it could carry out in a few years all such work that India requires. He points out that certain trees planted in India would in two years provide for the cultivators more fuel than the dung they burn.

The Voluntary Plan.

This argument recalls to us an account which appeared in the Daily News a week or two ago, of the "Forest Destroyers" of Africa who had been converted by intelligent advice from the habit of destroying their forests to be careful planters and foresters, and who are performing a great work of reconstruction without the intervention of the capitalist and the tribute he exacts. We recall, too, the building of the Jersey Granary carried out on a voluntary basis, without the medium of money or capitalists and the old practice of " calling in of aids" in parts of Switzerland and France for road-making, harvesting and so on.

If the people were enlisted in the great work of restoring and developing their country for their own benefit, it would be their pleasure to spend their spare hours in tree planting, roadmaking and other necessary work.

The non-co-operation movement has done so much in the homespun movement as a political and practical expedient for throwing off the grip of the foreign exploiter that we may look for it to expand in this most essential direction indicated by Mr. Lupton. Mr. Lupton points out that the modern innovations introduced by the British occupation have greatly increased the evil plight of the people.

The building of railways and other works by the British accelerated the cutting down of the trees, which help to make climate temperate and to moisten and enrich the soil. The

building of high embankments to prevent river flooding in order to protect the railways also deprived the soil of a valuable annual means of enrichment.

To-day and Two Hundred Years Ago.

Two hundred years ago Mr. Lupton believes the crops were larger per acre and much larger per man than to-day. Moreover, the Mongol conquerors recognised no landlords, the cultivators of the soil had no rent to pay, only the taxes of their rulers, which were lighter than at present.

Indeed, we must recognise that the lot of peoples cultivating the soil under primitive conditions is infinitely harder than was the lot of Western peoples when they also lead a primitive life, because the extortions of Governments, even of Eastern princes, are more extravagant than they were in past times. Western rulers, because of the greater wealth which can be produced under modern conditions of production, have increased their exactions and largely set the pace even for native rulers. The upkeep of Governments and armies to-day is vastly more costly than it ever was before in the history of the world. The Indian landowner pays no income-tax on the revenue he draws from his land. He is under no obligation to keep it in good condition. The British Government prefers to tax the salt of the poor rather than the land of the rich.

Diseases.

Mr. Lupton goes on to show that the deforestation and consequent drying up of the soil has led to many diseases. When water is lacking people leave their homes and encamp on the river beds; human excreta befouls the rivers; cholera results.

Plague comes of the poverty of the people. It can only be stamped out by feeding them better and burning down their old diseases ridden huts and erecting other dwellings.

One hears of the English being obliged to return from India's evil climate to recover health in England periodically. The fact is, that the well-fed English officials endure the climate far better than the starved Indian masses, who die off like flies from disease. In 1918 the death-rate in India was 62 per 1,000, that in England 17 per 1,000.

As to small-pox. India is the most vaccinated country in the world, yet the death-rate from small-pox runs up to 743,000 in a year.

Malaria is a terrible scourge in India. The infection is conveyed by mosquitoes. The way to stamp it out is to remove the pools and the swamps in which the mosquitoes breed. This has been done in Suez, where there was a deadly form of malaria. It would be a gigantic work in India, but eventually it must be done.

Blundering Irrigation.

Great has been the neglect by the Government of the soil of its Indian dependency, and when it has taken to some measure of irrigation it has often blundered. The irrigation canals of the Ganges have been anything but watertight, and have raised the subsoil water to within 3 feet of the surface. By capillary attraction through the heat of the sun, the water has been drawn to the surface and evaporated, leaving mineral deposits on the surface which have left it incapable of growing proper crops.

Amritsa, in the Punjab, a city notorious for weevils and their eggs are killed by the heat. and when, in view of the desperate swampi- of them do! ness, pumping was attempted, it was found that quicksands clogged the pumps.

The Saving Electric Power.

Major John Ashford invented, however, a pump which overcame this difficulty. It was, moreover, arranged to dam the canals at convenient points, and to step them down from a quest? four to nine feet. Some hydro-electric stations have been erected at these dams to take the power of the falling water, which serves to work the pumps by electric motors. The water pumped up is sold for irrigation, and brings in more than the cost of pumping, whilst power gained from the hydro-electric stations is conveyed on overhead wires to work other pumps or for other purposes.

Ten years after this plan had been put into operation there were only fifteen little wells, though thousands were required.

Making Manures from the Air.

Mr. Lupton goes on to point that such hydro-electric stations could be used for extracting nitrogen from the air to make nitrolene, or with sulphuric acid, sulphate of ammonia, or other compound of nitrogen which could be used for the manure India so much needs, and obviate buying it from

The Aid of the Mountains.

abroad.

The mountains, with all their wealth of timber and minerals, can yield to man armed with scientific knowledge a still mightier power. Unlimited electric power may be derived from the mountain rain and snowfall. Professor Shiv Narayan is quoted showing that 1,000,000,000 kilowats, or 1,300,000,000 horse power in potential energy, is there.

Already the hydro-electric plant of India is extensive. The Mysore gold mines are worked by it. The Canvery Falls provide 22,650 electrical horse power. 60,000 horse power is now used in the Bombay mills from the fall of water from the Western Ghats. The great Indian company of Tata has built on the Western Ghats artificial reservoirs where the rainfall is 100 to 250 inches a year, and falls during three months. The rain stored in the reservoirs is afterwards allowed to fall 1,725 feet. The power of the waterfall is used for electricity, and the water is afterwards sold for irrigation. The Tata company has in progress or contemplation works to produce 915,000 electric horse power from the waters of the Western Ghats.

Mr. Lupton urges that the Government should do the same on the eastern side of the Western Ghats, on the Eastern Ghats, in the

Himalayas and elsewhere.

The uses to which the electric power could be put for the popular good are limitless. Electric fans in the houses would mitigate the great heat. Motor-cars, aeroplanes, electrically run trains would provide transport. Electric power would light and heat the houses and drive the industrial plant. Electric wires stretched across the fields have been shown to increase the crops.

At the present time Mr. Lupton estimates that the food produced in India, apart from export, is just sufficient to keep alive the human population. There are, however, as many animals as people, and since the animals eat more grain and their pastures are often dried up so that they must be artificially fed, it is inevitable that many people and animals must starve.

wears of famine, storage will become a great dent upon the stronger capitalist powers. problem. Mr. Lupton points out that an More than this, if the power which is conexperiment which promises success has been tended for in coalfields, oil wells, and so on, tried. Ten per cent. of the corn is crushed and can be procured at home by all countries, a mixed with the whole grain, which is then great cause of war will cease.

Such defective irrigation also makes the heated to 160 degrees Fahr. The mixture is ground swampy, and produces, not food, but then put under a hydraulic press and converted mosquitoes, and, with them, malaria. This is into solid lumps weighing I cwt. These lumps notably the case in the neighbourhood of are too hard for mice and rats to bite, and

Turning to England.

It is not alone in the far countries of the East that the future beckons with romantic allurement. Everywhere science reveals new riches in spite of the cold shouldering of vested interests and the straitened circumstances of most of her votaries.

J. B. S. Haldane, in a slender little volume, *" Daedalus, or Science and the Future," reveals a new world to us here within our own

* Kegan Paul, 2s. 6d. The Energy of the Winds.

"Personally, I think that four hundred years hence the power question in England may be solved somewhat as follows:

"The country will be covered with rows of metallic windmills working electric motors, which, in their turn, supply current at a very high voltage to great electric mains. At suitable distances there will be great power stations, where, during windy weather, the surplus power will be used for the electrolytic decomposition of water into oxygen and hydrogen.

"These gases will be liquefied and stored in vats, vacuum jacketed reservoirs, probably sunk in the ground. If these reservoirs are sufficiently large, the loss of liquid due to leakage inwards of heat will not be great; thus the proportion evaporating daily from a reservoir 100 yards square by 60 feet deep would not be 1/1,000 of that lost from a tank measuring two feet each way.

"In times of calm, the gases will be recombined in explosion motors working dynamos which produce electrical energy once more, or more probably in oxidation

" Liquid hydrogen is weight for weight the most efficient known method of storing energy, as it gives about three times as much heat per pound as petrol. This will not, however, detract from its use in aeroplanes, where weight is more important than bulk.

"These huge reservoirs of liquified gases will enable wind energy to be stored, so that it can be expended for industry, transportation, heating, and lighting as

"The initial costs will be very considerable, but the running expenses less than those of our present system.

"Among its most obvious advantages will be the fact that energy will be as cheap in one part of the country as another, so that industry will be greatly decentralised; and that no smoke or ash will be produced. . . .

" Even now perhaps Italy might achieve economic independence by the expenditure of a few million pounds upon research on the lines indicated."

The End of War.

"Even now perhaps Italy might achieve economic independence by the expenditure of a few million pounds." The words are pregnant. Italy on the verge of a Soviet revolution recoiled, because her leaders called a halt When a surplus is produced to meet the on the ground that Italy is economically depen-

This Bill recalls the cruel lynching of Frank Little at Bute, Montana, in 1917, and of Wesley Everest, at Centralia, Washington, on December 31st, 1919. Apart from the Sundays, 3 p.m., Hyde Park. N. Smyth punishments for those who take part in the lynching and the State officials who do not take proper steps to prevent it, the county in which the lynching takes place is also liable to a fine which will be used to compensate the dependents of the person lynched.

> Five Years for Propaganda. In March, Tom Connors, an official of the

California Defence News Service, posted 20,000 circulars urging the repeal of the Criminal Syndicalism Law. One of these circulars chanced to reach a man named D. H. Arnold, who shortly afterwards was drawn for a panel of jurors, but not actually chosen to try the case. Because this circular by chance reached this man later drawn for the jury panel, Connors was tried for "corruptly attempting to influence a juror," and has been sentenced to five years' imprisonment.

The thing seems almost incredible, but remember it happened in California.

HOW TO FEED THEM.

By John Galsworthy. The usual week-end was in progress. Clara had made one of her greatest efforts. A Bulgarian had providentially written a book in which he showed, beyond doubt, that persons fed on brown bread, potatoes, and margarine, gave the most satisfactory results of all. It was a discovery of the first value as a topicy for the dinner-table-seeming to solve the whole vexed problem of the labourers almost at one stroke. If they could only be got to feed themselves on this perfect programme, what a saving of the situation! On those three edibles, the Bulgarian said—and he had been well translated—a family of five could be maintained at full efficiency for a shilling per day. Why! that would leave nearly eight shillings a week, in many cases more, for rent, firing, insurance, the man's tobacco, and the children's boots. There would be no more of that terrible pinching by the mothers, to feed the husband and children properly, of which one heard so much; no more lamentable deterioration in our stock! Brown bread, potatoes, margarine-quite a great deal could be provided for seven shillings! And what was more delicious than a well baked potato with margarine of good quality? The carbohydrates—or was it hybo-cardrates—ah, yes! the kybohardrates would be present in really sufficient quantity! Little else was talked of all through dinner at her end of the table. Above the flowers-which Frances Freeland always insisted on arranging, and very charmingly, when she was there-over bare shoulders and white shirt fronts, those words. bombed and re-bombed. Brown bread, potatoes, margarine, carbo-hydrates, calorific! They mingled with the creaming sizzle of champagne, with the soft murmur of wellbred deglutition. White bosoms heaved and eyebrows rose at them. And now and again some Bigwig versed in science murmured the word "fats." An agricultural population fed only into the bargain they could be induced to potatoes well! Faces flushed, eyes brightened and teeth shone. It was the best, the most stimulating dinner ever swallowed in that

much in the establishment of a more friendly mosphere between France and Britain." Out of office Mr. MacDonald reproached the Government for abandoning principle to keep n the footsteps of its predecessors: striving agreement, as follows: postpone war and at the same time preg pacifist and now Assistant Air Minister, s disclosed the fact that he is helping to y out the Air Force programme prepared is Tory predecessors, because, he asserts, country desires that policy to be followed. then, it may justly be asked, did the itry turn out the Tory Government?

The Labour Party promised a new spirit, out, like the other Governments, it is preparng the next war. The French Government s apparently setting the pace, but the retiring ogramme of the Tory Government was a love towards increased armaments, and the abour Party has adopted it.

French War Preparations.

ow M. Poincaré and his colleagues have led proposals for organising France for the ning war. Every individual "of both exes and of whatever age " is to receive his her "mobilisation card" for military service or the new "duty of National Defence." is there is to be industrial as well as miliry conscription in the fullest sense, and what is done in France in that respect will certainly done in this country also.

All corporations and firms are required to ce their services at Government disposal, and State requisitioning of factories, patents so on is provided for. The State opoly of industry is, however, to be exered by delegates chosen and appointed by e representatives of the manufacturers and erchants. Workmen of military age suscted of dangerous tendencies are to be asferred from the industrial army to the ting army. There undoubtedly they will shot in the back, as was done to many a good French rebel in the last war. The project indicates that the coming war will be ger and more terrible than the last:

"The stake at issue in the struggle being the very existence of the belligerents, none of them will lay down its arms before utter exhaustion."

he only alternative to this war is the abolition of the capitalist system.

Prepare for the general strike against war and the Communist Workshop Councils of tain and Western Europe. There lies the way of escape.

(Translated from the International Language

Two more years have flowed into the ocean of eternity since I related to my friends of La Mr. J. H. Hudson, lately a prominent C.O., Socio what I had experienced and how I had and now Parliamentary Private Secretary to spent my time in attaining the great aim of my the Chancellor of the Exchequer, had promised life: the construction of the basis of a new Mr. Pringle that he would second his motion, Anarchist-Communist Society, and I now wish which was virtually a vote of censure on the to give a report concerning these two years.

vote for the Government. Indeed, something 1913 because I could no longer tolerate the must have been happening in the ranks of the unnatural and therefore so largely hypocritical Snowden, C. P. Trevelyan, R. C. Wallhead ruin my medical practice. But here also I the continued validity of this warrant, I returned to Germany after the 'great revolution' and began to establish the new great Anarchist-Communist family. I was soon imprisoned but in consideration of a sufficiently heavy bail I was allowed to go about freely until I was finally sentenced to two years' imprisonment. But I had used my time and had brought about an organisation consisting of some 50 persons distributed over seven groups. When, therefore, after nine weeks there cccurred some difficulties within the groups and about communication with the State authorities, I was granted ten weeks' leave to rearrange the work of my organisation. For meanwhile a case had arisen which no one else could deal with. I had educated the child members of the cave in Berlin, i.e., two girls In reply to some interjections, Mr. —are not enforced. No inquiry save the from Berlin and seven from Uerdingen-on-the-Rhine. Now a society for the protection of children against exploitation and corruption asked the tutelar judge to take away the two daughters of the Berlin mother and place them in a State industrial establishment because the ideas which they had learned while with us were immoral and anti-state. The judge in fact decided that the mother, in educating her daughters in the ideas and the system of "The Cave of Zarathustra," was misusing the right of looking after her daughters, and ordered that they therefore be taken away from the mother. When the police came to fetch the two girls they found five others with regard to whom they had no power because these belonged to Uerdingen. Therefore, the Berlin Mr. Dukes (Con.) moved a Mothers' Pen- chief-of-police asked the tutelar judge in Uerare now obsolete and practically useless, sions resolution, expressly excluding unmarried dingen to decide that the right of educating and there are only about four which, from mothers and separated and divorced wives. her daughters be taken away also from the He proposed to pension civilian widows on the mother of these five. He must have time to overhaul the cisions and the case is again being gone into

Without any propaganda, merely by our life and constructive work, therefore, we have already compelled the State authorities to examine the question whether they have reason for, or possibility of, hindering such construction of a purely Anarchist-Communist Society. I am able to say that these two questions were negatived by almost all the authorities, that in Düsseldorf they even gave us State land for a colony and in Uerdingen a whole house belonging to the town, so as to be no longer bothered by the fellow-tenants. Also the question of the children's education will finally be decided as we desire, but we want to have question once for all.

present; we have four town groups, one purely of slavery is not this work, but the dependence Local finances have been separated from earned, and one mixed, i.e., country situated life, and this we can liberate from this slavery, the peasant proprietors have made of this so near the town that most of the group mem- and furthermore, we can by means of such an power. Wages are introduced again, even bers can still go into the factories to earn organisation take out more and more brothers indirect taxes on tobacco, coffee, matches, money. The State recognises the Anarchist-Communist organisation and protects us capitalist production, and make ourselves more The end will be a State bank, which acts as against the intrusions of some of the police or lower officials.

The question still remains: Is this an Anarchist-Communist organisation that lives so devoutly and obedient to the State laws, that the State authorities protect us? With a clear conscience I say, yes! For what is an Anarchist-Communist organisation? Certainly an organisation which lives according to the Anarchist-Communist principle, i.e., commercial production and individualist conscience, an organisation held together not by laws and statutes, but solely by the love and reason of each individual, an organisation governed not by coercive authority but by the competence of the most capable person, voluntarily recognised by those who wish to co-operate with him and follow his higher wisdom and capabily. An organisation which lives according to this principle is an Anarchist-Communist organisation and it does not matter whether such an organisation contains 50 or 500 million people; whether the whole of mankind, or a tiny group, lives according to this principle. But an organisation which, only for a few hours each week or month, brings its members together to discuss Anarchist-Communist principles, to publish papers or reviews and otherwise lives quite in accordance with the standpoint of capitalist morality, certainly is not an Anarchist-Communist organisation. Within our organisation, then, we live enmoney or working on the land, in the tailoring or shoemaking establishments, or the kitchen, belongs to the organisation and not to the producer, so that all can dispose of them. Everyone creates which he can, and takes what he needs. We do not recognise marriage or father for the maintenance of the expectant or actual mother and the child; the child belongs to the mother in accordance with natural law, both are members of the organisation, supported by the organisation. When the mother is has quite freed itself from State control. again strong enough, when the child has grown, they take part in the common production. Here is an Anarchist-Communist oriple alone decides in differences of opinion.

"Anarchist-Communist Society ought to con- and also with State industries." tain the whole of mankind. Such little groups nevertheless, work together economically, as enlarging banks and industries. we are doing now. Secondly; can we force people to live as Anarchist-Communists? Certainly not! I am truly convinced that all manfollowers of Moses; but there will always be tions, just as we have, and shall have, people who consider this responsibility a sign of their human dignity. Have these no right to live as free human beings just because the others are slaves? For we are only the slaves of our own weakness, and not of external things or

Is there a great difference between the creation of capitalism out of a peasant in In the beginning of 1918 the Bolshevist former centuries, or even in the 19th century, party, which was still more or less Commun- in South Africa, Australia and North America

Certainly the circumstances are different in peasant proprietors and creates tenant farmers the Colonies. There the peasants were free: and landless labourers-in short, it makes in Russia they came out of despotism, even in part out of mediæval conditions.

Yet are the Russian peasants free now?

No; the difference between the creation of capitalism in Russia to-day and in past times A part of the heavy and wholesale industry, is very slight. In the past capitalism was

Poor Russian workers! Even before Kron-State, neither you nor your organisations. Internal commerce in Russia is now un- and a dozen leaders. Nevertheless you had That power was held by a bureaucratic party

> Now you, or rather your class, has mo longer any hold over industry or commerce, even in the towns. It never secured possession of the soil; it no longer has either the most important food stuffs or the raw materials.

> The obligation for all to work no longer exists. The State no longer supplies them with food and other necessaries. It gives nothing without money. There are capitalists again and capitalist organisations. Wage battles and unemployment have returned, and there is even compulsory arbitration. Your class are wage slaves precisely as before.

> There is still a little State capitalism left, and the leaders of the capitalist State are the old favourite leaders of the Communist Party. What is the object of your work? To what end do you create surplus value by your

It serves capitalism. Firstly, the Government of the Soviet State uses it to enrich the The Russian Government is prepared to peasantry, that this class may grow and assist give great concessions to foreign capitalists. the growth of a peasants' and capitalists'

HAPPY INDIA

as it might be if guided by Modern Science.

by Arnold Lupton, Civil Engineer, 7. Victoria Street, London, S.W. 1.

He says:-

" My object in visiting India was to discover the real material condition of the people. My object in writing this book was to give

everyone who reads it an uncontrovertible statement of facts founded on the Government Statistics and the writings of Statesmen, Indian and English, of Professors of Agriculture, and of others, English and Indian, who have lived many years in India. The men of knowledge and Indian experience are in substantial agreement as to the facts which I have recorded. And the conclusions I have drawn follow inevitably from the facts."

EXTRACTS FROM REVIEWS.

Court Journal.

"There is no doubt that Mr. Arnold Lupton proves his case by chapter and verse, and his book is worthy of the serious consideration of

Statist.

"Mr. Lupton's book is well worthy of perusal by all who have the interests and welfare of India at heart."

Birmingham Post.

"The book bristles with figures, for Mr. Lupton makes no proposal that he does not support with calculations of cost and return. He has digested masses of official information, analysed volumes of statistics, and has produced a book that ought to be read by every Member of Parliament."

The Amrita Bazar Patrika (Calcutta).

"A valuable book which we heartily welcome." The Englishman (Calcutta).

"The author is neither a faddist nor a crank . . In eighteen short chapters . . . he appeals not to the sentiments, but to the common-sense of the Indian people. . . . He has figures of value to put forward . . .'

The Nation and the Athenæum.

"He argues that India is a country of unlimited potential wealth, crying to be drawn out. . . . If Mr. Lupton, whose book is lucid and dispassionate can succeed in converting, say, a thousand influential Indians to his idea, the history of Asia will be changed."

Justice.

"His book contains a great deal of downright good sense. . . . And I now gum a label on the cover of his 'Happy India,' and inscribe on it worth reading."

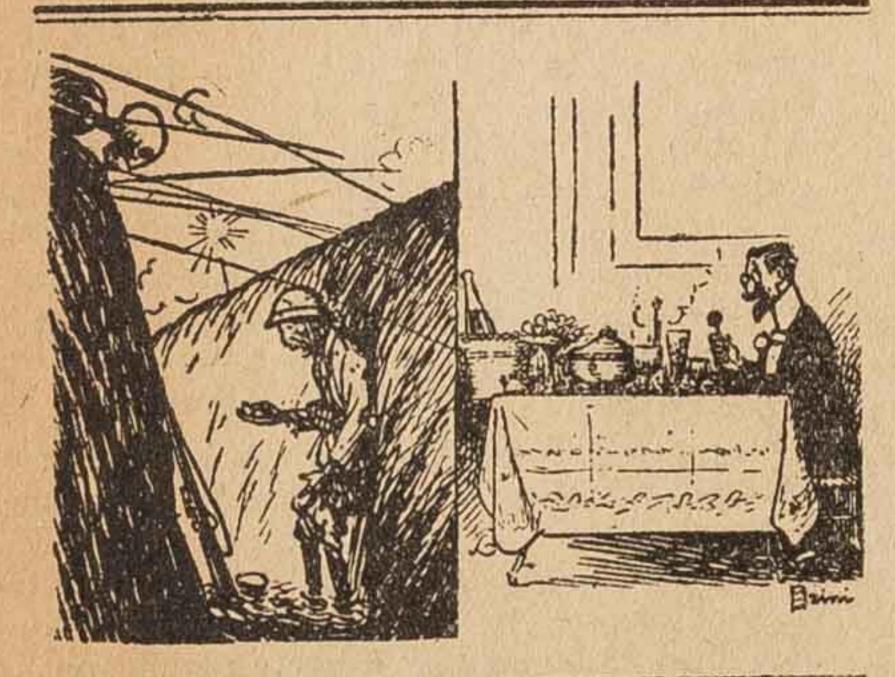

The Manchester City News.

"There are Englishmen, however, great enough to have a conscience. Mr. Arnold Lupton is one of them. . . . Mr. Lupton landed in India, toured the country, spoke with officials, doctors, engineers. farmers, labourers, read the multitude of Indian Government reports and statistics . . . his information he has collated and examined, and finally, with the aid of sound common-sense, keen insight, and good scientific knowledge, he has written one of the most remarkable books, not of the year, but of the century, a book which sets out in practical details how India can be recreated anew, at small expense, so as to be one of the happiest and most prosperous countries in the world"

Communism in Russia is the sinking appearance. Capitalism is the rising and expanding reality.

It is certain that under the lead of the Bolshevists will arise a mighty enemy of the proletariat revolution; a Russian capitalist State, only equalled in its vast richness of natural resources by the United States of America.

(To be continued.)

SPICE.

Did a little bird hear rightly when she heard that the nine official candidates of the National Union of General Workers draw their salaries as before, and in addition an allowance from their union of £400 a year, beside the £400 a year from Parliament, beside their election expenses, beside an allowance of £600 a year to cover the cost of keeping their constituencies worked up, including the expenses of their agents?

Did the little bird hear rightly when she heard that the General Secretary of the Workers' Union, Mr. W. Thorne, gets £596 a year in salary, plus £400, plus £400, totalling £1,396, plus payment of expenses?

Did she hear rightly that the district organisers of the union, who are official candidates, get £8 5s. per week salary, plus £400 a

year, plus £400 a year?

Are the organisers of the union, including those Parliamentary representatives, paid 12s. 6d. a day for conference, and is a day always charged for going and coming, even when not required? Are they also paid 5s. for each meeting they attend?

If the little bird has heard correctly, the National Union of General Workers has carefully safeguarded from being put to the test that spirit of self-sacrifice which Miss Margaret Bondfield, one of the union's official candidates, has so eloquently attributed to the Labour Members of Parliament.
